

# Skeletal System Anatomy Bones, Joints and Ligaments

Scott Riewald  
United States Olympic Committee

---

---

---

---

---

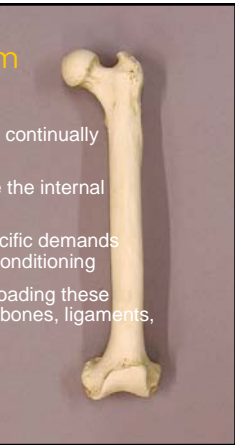

---

---

---

## The Skeletal System

- Bone is dynamic with living cells that continually remodel bone tissue
- Bones of the skeletal system provide the internal framework of the body
- Responds through adaptation to specific demands placed upon it through training and conditioning
- Specific protocols of loading and unloading these tissues cause unique adaptations to bones, ligaments, tendons, and cartilage.

Skeletal Anatomy

---

---

---

---

---

---

---

---

## Function of the Skeletal System

- **Structure and protection**
- **Movement**
- **Blood cell production**
  - Spongy bone houses the red marrow that produces blood cells
  - The production of red and white blood cells is a result of differentiation of mature blood stem cells which reside primarily in the flat bones of the skull, ribs, sternum, and the ends of the long bones.
  - Every second, the body produces over 2 million RBCs

---

---

---

---

---

---

---

---

## Types of Bones

### a. Flat bones

- ✓ Sternum, ribs, skull

### b. Long bones

- ✓ Femur, tibia, humerus

### c. Irregular bones

- ✓ Vertebrae, maxilla

### d. Short bones

- ✓ Carpals, tarsals

---

---

---

---

---

---

## Bone Cells - Osteocytes

- Osteoclasts – reclaim calcium or damaged bone

osteocytes

- Osteoblasts – deposit matrix of new bone

osteoclast

osteoblast

Both responsible for remodeling that can occur with training and skeletal loading.

cartilage matrix

Skeletal Anatomy

---

---

---

---

---

---

---

---

## Axial Skeleton

- Skull
- Vertebral column
- Sacrum
- Coccyx
- Ribs
- Sternum

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Appendicular Skeleton

- **Shoulder Girdle**
  - ✓ Clavicle
  - ✓ Scapula
- **Arm Bones**
- **Pelvic Girdle**
  - ✓ Pelvic bones
- **Leg Bones**

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

---

## Skeletal Anatomy: Bones to Know

- Skull
- Clavicle
- Humerus
- Radius
- Ulna
- Carpals
- Metacarpals
- Phalanges
- Ribs
- Sternum

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

---

---

## Skeletal Anatomy: Bones to Know

- Scapula
- Pelvis – ilium, pubis
- Femur
- Tibia
- Fibula
- Patella

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

---

---

## Bones of the Foot

- Talus
- Calcaneous
- Metatarsals
- Phalanges

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Spinal Column

- **Cervical Spine**  
✓ 7 vertebrae
- **Thoracic Spine**  
✓ 12 vertebrae
- **Lumbar Spine**  
✓ 5 vertebrae
- **Sacrum**  
✓ 5 fused vertebrae
- **Coccyx**  
✓ 4 fused vertebrae

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Curvature of the Spine

- Lordosis** – “inward” curvature of the spine
- Kyphosis** – “outward” curvature of the spine
- Scoliosis** – lateral curvature of the spine

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Types of Bone

- **Cortical Bone:**
  - ✓ Highly mineralized
  - ✓ Dense
  - ✓ Shafts of long bones
  - ✓ Outer layer at ends
  - ✓ Smaller bones
- **Trabecular Bone:**
  - ✓ Less mineralized
  - ✓ More porous
  - ✓ Bone ends

Skeletal Anatomy

---

---

---

---

---

---

---

---

## Growth Plates – Epiphyseal Plates

- Site of bone growth
- Long bones can continue to grow until closure of plates.
- Risk of injury

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

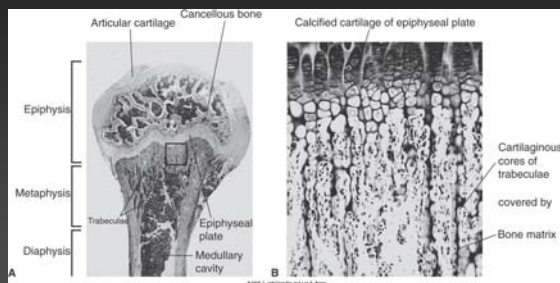

---

---

---

---

## Primary Bone Growth at Epiphysis

---

---

---

---

## Joint Classifications

- **Fibrous/ Synarthrosis (immoveable)**
  - ✓ Dense connective tissue/ collagen
  - ✓ e.g. Skull sutures, distal radio-ulnar, pelvis
- **Cartilagenous/ Amphiarthrosis (partially moveable)**
  - ✓ Connected by cartilage
  - ✓ e.g. ribs
- **Synovial/ Diarthrosis (freely moveable)**
  - ✓ Have a joint capsule/ bursa with synovial fluid
  - ✓ Most joints in the body

---

---

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

---

---

## Synovial: Ball and Socket Joint

- Movement in three planes
  - ✓ Flexion/ extension
  - ✓ Abduction/ adduction
  - ✓ Rotation
- Most mobile
- Examples:
  - ✓ Hip and shoulder joints

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

---

---

## Synovial: Hinge Joint

- Movement in one plane
  - ✓ Flexion/ extension
  - ✓ Uniaxial
- Examples:
  - ✓ Interphalangeal joints of foot and hand
  - ✓ Ulnohumeral joint at the elbow.

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Synovial: Condylloid Joint

- Movement primarily in one plane with small amounts of movement in another plane
  - ✓ Flexion/ Extension
  - ✓ Rotation
- Examples:
  - ✓ Knee joint

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Synovial: Pivot Joint

- A ring of bone and ligament surrounds the surface of the other bone
- Uniaxial movement in one plane
  - ✓ Rotation
  - ✓ Pronation/ supination
- Examples:
  - ✓ Between cervical vertebrae 1 & 2 (atlanto-axial articulation)
  - ✓ Proximal radio-ulnar joint
  - ✓ Distal radio-ulnar joint

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Synovial: Gliding Joint

- Movement does not occur about an axis and is termed non-axial since it consists of two flat surfaces that slide over each other to allow movement.

- **Examples:**
  - ✓ Between tarsal bones in foot -
  - ✓ Between carpal bones in hand

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Synovial: Ellipsoid Joint

- Allows movement in two planes

- ✓ Flexion/ extension
- ✓ Abduction/ adduction
- ✓ Biaxial.

- **Examples**

- ✓ radiocarpal articulation at the wrist
- ✓ metacarpophalangeal articulation in the hand

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Synovial: Saddle Joint

- Only at the carpometacarpal articulation of the thumb

- Two planes of motion
  - ✓ Flexion/ extension
  - ✓ Abduction/ adduction
  - ✓ Small amount of rotation also allowed.

- Similar to the ellipsoid joint in function.

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Wolff's Law

"The densities, and to a lesser extent, the sizes and shapes of bones are determined by the magnitude and direction of the acting forces applied to bone."

**Specificity** - The body will adapt to the stresses placed upon it – as long as those stresses are reasonable and not excessive.

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Minimal Essential Strain (MES)

- Minimum volume and intensity of loading required to cause an increase in bone density
- Approx. 10% of the strain required to fracture bone is considered the threshold at which new bone formation is triggered
- **What's the process?**
  - ✓ Strain triggers 'bone activation' remodeling
  - ✓ Osteoclasts remove 'damaged bone' – 1 to 3 weeks
  - ✓ Shut down of osteoclasts, switch to osteoblasts – 1 to 2 weeks
  - ✓ New bone formation – total time 3½ months

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Skeletal Adaptation to Stress

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Appropriate Training Stimuli

- 'Dynamic loading' – rapid loading
  - ✓ Axial loading/ higher impact forces
- Higher Frequency loading
- Directional specificity
  - ✓ Small gains in bone density can produce large strength improvements
- More, shorter workouts as opposed to longer ones
  - ✓ Takes 6-8 hours for bone to recover ability to lay down new bone

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Skeletal Adaptations to Loading

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Ligaments

- Fibrous tissue
- Connects bone to bone
- Stabilizes joint
  - ✓ Restrict or limit movement to certain planes
  - ✓ Also 'fix' one bone to another (e.g. acromioclavicular joint)

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Major Ligaments in Knee

- **ACL** - Anterior cruciate ligament
  - ✓ Keeps tibia from moving forward
- **PCL** - Posterior cruciate ligament
  - ✓ Keeps tibia from moving backwards
- **MCL** - Medial collateral ligament
- **LCL** - Lateral collateral ligament

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Articular Cartilage

- Covers ends of long bones
- Made of collagen, water, stiff gel-like substance, proteoglycans
- Provides smooth surface (low friction) under pressure
- Osteoarthritis

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Cartilage Layers

1. The articular surface, which is super slick
2. The mid-zone composed of collagen fibrils and fluid swollen proteoglycans
3. The deep zone layer
4. The tidemark region where the cartilage matrix meshes with the actual bone structure

KIN 856 – Physical Bases of Coaching  
Skeletal Anatomy

---

---

---

---

---

---

---

---

## Skeletal Health - Osteoporosis

- Loss of bone density
  - ✓ Postmenopausal women
  - ✓ Men and women >70
  - ✓ Young athletes with eating disorder (e.g. anorexia)
- Higher bone density in 'active years' leads to higher bone density later in life
- Female athlete triad
- **DEXA scan**
